Panoptic Resources Launches Expedition Sentinel Skywatch: Using AI and Advanced Aerial Intelligence to Solve the UAP Mystery

WINSTED, CT — June 1st, 2026 — Panoptic Resources today announced the official launch of Expedition Sentinel Skywatch, a multidisciplinary initiative designed to bring unprecedented transparency to the study of Unidentified Anomalous Phenomena (UAP). By deploying a proprietary "Sentinel" system—a platform integrating sophisticated sensors, multi-spectrum instrumentation, and custom AI—the project aims to transform the unexplained into actionable aerial intelligence for the public record.

For decades, the nature of UAP has been a subject of speculation and debate. Expedition Sentinel Skywatch approaches this challenge not as a mystery, but as a data-acquisition mission. The initiative's core philosophy is "Panoptic Visibility": a commitment to an all-seeing, high-fidelity monitoring strategy that leaves no room for blind spots in the atmosphere.

"Our mission is to replace curiosity with certainty," said the Lead Project Architect at Panoptic Resources. "By combining a world-class team of data scientists and surveillance experts with the latest in AI-driven sensor technology, we are providing the professional rigor that the aerospace industry and government entities require, while ensuring the data remains accessible to the global public."

The project is more than a technological proof-of-concept; it is an active, human-led operation. Panoptic Resources has confirmed a full calendar of Expeditions scheduled through 2026, targeting key geographic locations where aerial anomalies have been historically reported. These missions will serve as the primary source for the high-grade data sets the team plans to release throughout the year.

Unlike traditional surveillance that often remains classified or proprietary, Expedition Sentinel Skywatch is committed to an open-data model. The initiative's role is to gather the intelligence, analyze it for anomalies, and present it in a format that is understandable to both the scientific community and the general public.

About Panoptic Resources

Based in Winsted, CT, Panoptic Resources is a leader in visual security, aerial intelligence, and forensic audio-visual technology. The company specializes in creating high-end infrastructure for surveillance and data analysis, providing "total visibility" solutions for complex environments.
